The Power of Control

Choose Eaton® to get the most out of your drivetrain.

Detroit Locker

The Detroit Locker is a 100% automatic locking differential that provides ultimate traction for mild to extreme vehicle applications. Its unique, bullet-proof design is engineered to keep both wheels in drive mode - even if one wheel is lifted off the ground.

- 100-percent automatic locking
- Unmatched strength
- Maintenance-free
- Provides maximum amount of traction to both wheel ends

Eaton ELocker

The Eaton ELocker is an electronic, selectable differential designed for drivers that need traction on-demand. At the flip of a dash switch, drivers can go from open to 100-percent locked. A second flip of the switch deactivates the unit to resume normal driving.

- Driver selectable operation
- Net-forged gears for maximum strength and durability
- Most reliable on-demand differential
- Quickly send all torque to both wheels to overcome obstacles

Detroit Truetrac

The Detroit Truetrac is a helical-gear style limited-slip differential that maximizes wheel traction and enhances driving and handling characteristics. Its versatility makes the Detroit Truetrac the ideal traction solution for almost any type of vehicle.

- Smooth, automatic operation
- Maintenance-free
- Unique, helical gear design
- Ideal for most vehicles

Eaton Posi

The Eaton Posi limited-slip differential is the perfect way to control traction in street rods, light duty pickups and all types of tarmac running race cars.

- Race-bred carbon friction discs
- Rebuildable design
- Net-forged gears for added strength
- Smooth, automatic operation
- Tunable via various spring packs (pre-loads)

NEW

Differentials for Jeep Wrangler (JL) and Gladiator (JT)

NEW

Wrangler JL - Front & Rear Applications
(all models excluding Rubicon unless otherwise stated)

Model Year Applicability
2018 - Current

Detroit Truetrac: Axle Spline: 32 (917A736*)

Eaton ELocker: Axle Spline: 29 (14244-1*)
Axle Spline: 32 (14234-1*)

Axle Spline: 35 (14313-2*) (Includes Rubicon)

917A736 32 Spline

NEW

Gladiator JT - Front & Rear Applications
(all models excluding Rubicon unless otherwise stated)

Model Year Applicability
2020 - Current

Detroit Truetrac: Axle Spline: 32 (917A736)

Eaton ELocker: Axle Spline: 32 (14234-1*)

Axle Spline: 35 (14313-2*) (Includes Rubicon)

ELocker®

14234-1* 32 Spline
14244-1* 29 Spline
14313-2* 35 Spline

See page 19-20 for more details.

*See the notes section regarding specific installation notes for this differential.

New ELocker Fitments

NEW

NEW

Ranger w/o OEM ELocker (Excl. Tremor & Raptor)

Model Year Applicability

2019-2022 Front & rear fitments available

Axle Model: Dana M190 IFS

Axle Spline: 29 teeth

Gear Ratio: All

Axle Model: Dana M220

Axle Spline: 32 teeth

Gear Ratio: 3.73

See page 17 for more details.

NEW

Land Rover Defender 110/130, Range Rover Classic, Defender 90, Discovery Series I & II

Model Year Applicability

1993-2015 Front & rear fitments available

Axle Model: Rover Type (some excl. P38)

Axle Spline: 24 teeth

Gear Ratio: 3.54

See page 20 for more details.

NEW

Porsche Cayenne 955, Cayenne 957

Model Year Applicability

2003-2010 Front fitments available

Axle Model: ZF Axle model 955-349-010 (IFS)

Axle Spline: 37 teeth

Gear Ratios: 3.73, 3.90, 4.10, 4.56

See page 21 for more details.

NEW

Volkswagen Touareg (First Generation)

Model Year Applicability

2002-2010 Front fitments available

Axle Model: ZF IFS

Axle Spline: 37 teeth

Gear Ratio: 3.73, 3.90, 4.10, 4.56

See page 22 for more details.

NEW

ELocker for Toyota Applications

See pages 21-22 for further information.

NEW

New Differentials for Fords

NEW

Ford Bronco (G6 w/o Factory Locker, excluding Raptor)

Model Year Applicability
2021 - 2023

Ring Gear Dia.: 8.66"

Axle Shaft Dia.: 1.41"

Axle Spline: 32 teeth

Gear Ratio: 3.73

Location: Rear

Detroit Truetrac: 917A736*
Eaton ELocker: 14234-1*

Notes: Factory 3.73 gear equipped Ford Broncos feature a welded ring gear/open differential and will require a replacement M220JL ring & pinion to complete installation.

917A736* 32 Spline

See page 17 for further information.

NEW

Ranger w/o OEM ELocker (Excluding Tremor & Raptor)

Model Year Applicability
2019-2022 Front & rear fitments available

Axle Model: Dana M190 IFS

Axle Spline: 29 teeth

Gear Ratio: All

Axle Model: Dana M220

Axle Spline: 32 teeth

Gear Ratio: 3.73

Detroit Truetrac: 917A736*
Eaton ELocker: 14234-1*

ELocker®

14234-1* 32 Spline

Quality. Strength. Durability.

Eaton offers a broad portfolio of differentials to meet the unique needs of performance and enthusiast drivers. Our lineup includes locking and limited-slip, automatically engaging and driver-selectable products. Choosing an Eaton Performance differential not only ensures ultimate performance, our superior product quality reduces time spent in the garage and decreases wallet-draining driveline repairs.

General Information

Application Guide Usage

How to use this application guide

1. Navigate to the appropriate vehicle type and OEM.
2. Using your vehicle owners manual, find the correct model year and axle type.
3. **If known**, find the correct axle shaft diameter, spline count and gear ratio.
If unknown, please consult your local mechanic as these items are critical to selecting the appropriate differential unit.
4. Find the Eaton differential products available for your specific vehicle.

Year	Description	Ring Gear Diameter	Axle Shaft Diameter	Spline Count	Gear Ratio	Detroit Locker	Detroit Truetrac	Eaton Posi	Eaton ELocker
GM: Chevrolet, Pontiac, Buick and Oldsmobile									
1964 - 1972	GM 12 bolt car	8.875"	1.29"	30	3.08 - 3.90	187C197A	913A555*	19554-010	
1964 - 1972	GM 12 bolt car	8.875"	1.29"	30	4.10 & up			19555-010	
1964 - 1972	GM 12 bolt car	8.875"	1.41"	33	3.08 - 3.90		914A576*		
1964 - 1972	GM 12 bolt car	8.875"	1.41"	33	4.10 & up		914A575*		
Custom	GM 12 bolt car	8.875"	1.50"	35	3.08 - 3.90				

5. IMPORTANT

Eaton Performance differentials are designed for very specific axle applications. Product listings with an asterisk(*) may require special components or special technical knowledge for installation. Please review the notes section and consult with your local mechanic prior to purchasing or installing any Eaton product.

Quick Reference

No matter your application, Eaton Performance has a differential to meet your needs.

Differentials Passenger Car

Street and Muscle

Transform your daily driver to street machine and back again with Eaton products. Not only will you be the envy of your neighborhood, you will have ultimate performance for your commute during all four seasons.

Drag Racing

Vehicles that run on the quarter mile have unique demands. Choose an Eaton Performance differential to reduce wheel slippage and ensure domination from the green light to the finish line.

Restoration

Don't let that old classic rot away in the garage. Restore it back to the original condition with a performance differential enhancement. It will feel like you're driving off of the lot for the first time again.

"We always try to stay a step ahead of everybody else. It takes a company like Eaton to keep us there."

Ford 9" 2.00 large bearing	1.32"	31	All	R18715A (was R18707A)

*See the notes section regarding specific installation notes for this differential.

Work Truck / Towing

When uptime is important, choose Eaton Performance differentials. Mud, sand and stones will be no match for your work truck or toy hauler.

Trail and Sand Sports

Looking to dig into rugged terrain or sandy trails? Equip your vehicle with the necessary traction device to power through the difficult spots.

Rock Crawling

If you're taking your rig on the rocks, chances are wheels will be in the air. Choose our automatically engaging or driver-selectable products to ensure you do not end up stranded in mother nature.

Extreme Off-Road

Extreme vehicles require the most capable, durable products. When fans, friends and sponsors are relying on you - why select any other product than the best? Choose Eaton performance differentials - engineered by the experts in driveline for more than 100 years.

Differential Install Notes

This section provides important information about specific requirements needed to properly fit the differential in the vehicle. Please visit eatonperformance.com/installation for the latest notes and updates.

Part Number	Differential Notes
14023-010	For use with non-thick ring gears only.
14211-1	For use with 10 bolt ring gear design. On 2016+ Toyota Tacoma, fits 8.0" ring gear, automatic transmission, <u>not</u> equipped with factory locker. Some OEM factory equipped differentials have a 53mm ID bearing and will require new carrier bearings Koyo #TR100802-2.
14212-1	Uses 50mm inner diameter bearings (Ref. #32010-JRYA1). In Toyota Land Cruiser applications, only fits models with non-C-clip axle designs (non-USA model).
14215-1	Housing may require relief grinding to properly seat electro-magnet. 33mm output shaft or manual locking hubs for '09-'18 Land Cruiser 150 series rear axle.
14216-1	For use with 12 bolt ring gear design.
14217-1	Clamshell style housing only.
14218-1	Front application only. Large hub bearing diameter (50 mm) uses Toyota bearing #90368-50006. Clamshell style housing only.
14219-1	Clamshell style housing only, housing may require relief grinding to properly seat electro-magnet.
14220-1	Non clamshell style housing only.
14221-1	Clamshell style housing only, housing may require relief grinding to properly seat electro-magnet.
14232-1	Toyota Tundra: 5.7L V8, only works with housings <u>not</u> equipped with OE electric lockers.
14234-1	¹ The stator must be removed for clearance prior to installing the ring gear. Stator must be removed and reinstalled in the follow order: (1) Ring Gear, (2) Stator Assembly, (3) Bearing. ² Factory 3.73 gear equipped Ford Broncos/Rangers feature a welded ring gear/open differential and will require a replacement M220 Jeep JL ring & pinion to complete installation.
14235-1	Tacoma 2016+: All manual transmissions and factory locker equipped trucks.
14244-1	The stator must be removed for clearance prior to installing the ring gear. Stator must be removed and reinstalled in the follow order: (1) Ring Gear, (2) Stator Assembly, (3) Bearing.
14294-1	OE bearings can be used: LM503349A & LM503310). OE Porsche axle number 955-349-010. Excludes V10 Applications.
14302-1	14302-1 - Front axle serial number 35S18135C or 37S08651B and later. Rear axle serial number 35S18135C or 37S08651B and later. May accommodate additional aftermarket R&P ratios, check with R&P manufacturer. Bearing cap relief grinding may be required for proper clearance between the bearing cap and the electro-magnet.
14313-2	The stator must be removed for clearance prior to installing the ring gear. Stator must be removed and reinstalled in the follow order: (1) Ring Gear, (2) Stator Assembly, (3) Bearing. Requires use of aftermarket 35 spline axle shafts. Axle DIA: 1.50", Spline: 24/48 DP, 30° Pressure Angle. Rubicon models will require an aftermarket locker control harness to integrate with the OEM locker control switch.
162C66A	Bearing LM102949 and race LM102911 and unique outboard shims are required.
162SL60A	Applies to non-axle disconnect style housing only.
162SL60B	Applies to non-axle disconnect style housing only.
187C145A	4.56 and numerically higher gear ratios require relief grinding on ring gear tooth crown for proper installation.
187C147A	4.56 and numerically higher gear ratios require relief grinding on ring gear tooth crown for proper installation.
187C148A	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required.
187C149A	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required.

Differential Install Notes

Part Number	Differential Notes
187C152A	Uses 45mm inner diameter bearings
187SL16C	Applies to non-axle disconnect style housing only. For use with non-thick ring gears only. Not for use with factory JK and later housings.
187SL16D	Applies to non-axle disconnect style housing only. For use with non-thick ring gears only. Not for use with factory JK and later housings.
187SL173A	187SL173A - Rear axle serial number 35S18135C or 37S08651B and later. May accommodate additional aftermarket R&P ratios, check with R&P manufacturer.
187SL192A	For use with Super Dana 44 housing only. Bearing LM104949 and race LM104912 are required.
187SL61B	32010X bearing allows 913A610 in place of 913A611.
19556-010	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required.
19557-010	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required. Manual locking hubs recommended for front axle applications.
19559-010	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required. Manual locking hubs recommended for front axle applications.
19659-010	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required. Manual locking hubs recommended for front axle applications.
19686-010	Factory housings containing open differentials requires require relief grinding for installation.
19694-010	Full float applications only.
19817-020	Bearing LM102949 and race LM102911 and outboard shims are required.
19818-020	Bearing LM102949 and race LM102911 and outboard shims are required.
19819-020	Bearing LM102949 and race LM102911 and outboard shims are required.
19821-020	Bearing LM102949 and race LM102911 are required.
19822-020	Bearing LM102949 and race LM102911 are required.
225S10	225S10 differential replaces the conventional (non-locking) differential internals only. Removal of thrust washers is required.
225SL105A	Will fit OE 3.73 thin gear sets.
225SL131A	Will fit OE 3.73 thin gear sets.
225SL29A	For use with non-thick ring gears only.
225SL36	225SL36 - (NoSPIN), replaces conventional (non-locking) differential internals only.
225SL56A	Full float applications only.
910A400	Rear axle serial numbers and later: Range Rover - suffix F, 88 - suffix G, 109 V8/1 ton - (Salisbury standard), 109 4 cyl. ¾ ton - (Salisbury optional).
911A342	Front application only. Large hub bearing diameter (50 mm) uses Toyota bearing #90368-50006. Will not fit clamshell housing.
911A445	1986-1988 7.5" independent front suspension. Will not fit selector disconnect "shift on the fly". Small hub bearing diameter (45 mm) applications only.
912A383	912A383 - Rear axle serial number 35S18135C or 37S08651B and later. May accommodate additional aftermarket R&P ratios, check with R&P manufacturer.

Differential Install Notes

Part Number	Differential Notes
912A407	912A407 - Front axle serial number 19L11363C or 57L05188B and later. May accommodate additional aftermarket R&P ratios, check with R&P manufacturer.
912A556	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required. Manual locking hubs recommended for front axle applications.
912A557	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required. Manual locking hubs recommended for front axle applications.
912A584	Applies to non-axle disconnect style housing only.
912A585	Applies to non-axle disconnect style housing only.
912A616	Bearing LM102949 and race LM102910 are required.
913A481	All Eaton differentials made for General Motors 8.5" and 8.6" axles require special bearings. For axles with small bearing bores (race O.D. or 2.89"), usually found on vehicles prior to 1999, bearing LM102949 and race LM102911 are required. For axles with large bearing bores (race O.D. of 3.06"), usually found on vehicles from 1999-2013, bearing LM603049 and race LM603012 are required. Manual locking hubs recommended for front axle applications.
913A555	Designed to fit axles cut with 45-degree pressure angles.
913A582	All vehicles equipped with OE Electric Locker option require axle shaft relief grinding for proper fit.
913A589	For use with non-thick ring gears only.
913A590	For use with non-thick ring gears only.
913A591	Applies to non-axle disconnect style housing only.
913A592	Applies to non-axle disconnect style housing only.
913A609	Small hub bearing diameter (45 mm) application only.
913A610	32010X bearing allows 913A610 in place of 913A611.
913A701	For non-c-clip applications only.
914A575	Detroit Truetrac, 33-spline units for this application are designed to fit axles cut with 45-degree pressure angles.
914A576	Detroit Truetrac, 33-spline units for this application are designed to fit axles cut with 45-degree pressure angles.
914A583	Detroit Truetrac, 33-spline units for this application are designed to fit axles cut with 45-degree pressure angles.
914A643	2007 and newer vehicles require model years 2003-2006 ring and pinion.
914A690	For use with 3.25" bearing bore (aftermarket housing).
915A388	For use with non-thick ring gears only.
915A450	Will fit OE 3.73 thin gear sets.
915A550	Full float applications only.
916A427	Will fit OE 3.73 thin gear sets.
917A732	Factory oil drain plug may require relief grinding for correct fitment.
917A736	Factory 3.73 gear equipped Ford Bronco/Ranger feature a welded ring gear/open differential and will require a replacement M220 Jeep JL ring & pinion to complete installation.

DIFFERENTIAL	SERVICE KIT TYPE	COMPONENTS	SERVICE KIT PART#
Various Dana 60 2 Pinion	Universal Wiring Kit	Dash switch, fuse & holder, relay, suppression device, solenoid, wiring harness & connectors and conduit	23249-00S
	Gear Service Kit Dana 60, 35 spline	Side gear, pinion gears, shims, pinion thrust washers, pinion shaft(s) and shaft lock screw	26882-00S
	Stator/Armature Kit	Stator, bearing race, thrust bearing and retaining ring	26665-00S

DIFFERENTIAL	SERVICE KIT TYPE	COMPONENTS	SERVICE KIT PART#
DANA 60/70 4 Pinion	Universal Wiring Kit	Dash Switch, mini-fuse ignition tap, resettable breaker, relay, shunt device, wiring, & connectors	23249-00S
	Stator/Armature Kit	Stator, Armature, (2) Retaining Ring	23281-00S

Detroit Truetrac C-Clip Retaining Kits

Differential part number abbreviation for c-clip kits

The last 3 digits of a product number provides the model number information. For example part number 912A553 would be listed as 553.

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
315	C-Clip Retaining Kit	TT12P10431

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
316	C-Clip Retaining Kit	52742

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
317, 319, 415	C-Clip Retaining Kit	52738

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
368	C-Clip Retaining Kit	52737

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
384, 553	C-Clip Retaining Kit	52735

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
477	C-Clip Retaining Kit	52741

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
481, 556, 557	C-Clip Retaining Kit	52733

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
538	C-Clip Retaining Kit	52743

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
555, 564, 575, 576	C-Clip Retaining Kit	52731

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
561	C-Clip Retaining Kit	52736

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
569	C-Clip Retaining Kit	52870

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
577	C-Clip Retaining Kit	52785

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
654	C-Clip Retaining Kit	TT70P10537

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
730	C-Clip Retaining Kit	TT12P53093

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
731	C-Clip Retaining Kit	TT70P30640

MODEL	SERVICE KIT TYPE	SERVICE KIT PART#
732	C-Clip Retaining Kit	TT70P10659

PREVENT FAILURE

Choose the right oil for your Eaton Performance differential

Selecting the proper oil-type for your differential is very important. Improper lubrication can cause unnecessary wear or even worse - failure. With literally hundreds of options to choose from, the lube aisle at the auto parts store can be overwhelming. The quick tips below will help in finding the correct oil for optimum performance.

ELocker®

- Most gear oils are sufficient: a quality, petroleum-mineral based oil is recommended.
- Synthetic oils and friction modifiers can also be used, but are not necessary.
- In cold weather conditions, a lower viscosity gear oil (equivalent to API GL-5 75W-90) is recommended.

- Most gear oils are sufficient: a quality, petroleum-mineral based oil is recommended.
- Synthetic oils and friction modifiers can also be used, but are not necessary.

- A quality, petroleum-mineral based, GL5 rated 80w-90 gear oil should be used.
- Synthetic oils are not recommended for Truetrac applications. While some customers have found that synthetic oils works well in this application, Eaton has not confirmed under test conditions that all synthetic oils are compatible with Eaton Truetrac applications.
- Friction modifiers should not be used because they will decrease performance (reduce differential bias).

Posi®

- A quality, petroleum-mineral based, GL5 rated 80w-90 gear oil should be used.
- It is necessary to add a four-ounce bottle of friction modifier for optimum performance (if friction modifier has not already been added to the petroleum-mineral based gear oil that the customer selects).
- While some customers have found that synthetic oil works well in this application, Eaton has not confirmed under test conditions that all synthetic oils (with added friction modifier) are compatible with Eaton Posi applications.

What is the standard warranty? Do I need to break-in my unit?

Shimming for a Pattern

Shimming for a pattern

Ideal Contact

Pattern is spread evenly over the tooth's profile with concentration nearer toe than heel.

Competition Contact

Pattern concentrated just up from the toe covering one third to one half of the tooth.

Heel Contact

Pattern is concentrated off the heel end of the drive gear tooth. Move the ring gear close to the pinion (decrease backlash) while maintaining minimum backlash.

Toe Contact

Pattern is concentrated off the toe end of the drive gear. Move the ring gear away from the pinion (increase backlash) while maintaining minimum backlash.

High Contact

Pattern is concentrated at the crown of the drive gear tooth. Move the pinion deeper in towards the differential carrier (add pinion shim).

Low Contact

Pattern is concentrated in the root of the drive gear tooth. Move the pinion out away from the differential carrier (subtract pinion shim).

*may be out board of bearings, or utilize spanner style adjuster rings

Verifying Clearance

- While Eaton designs every differential to be a direct fit into every application, we still advise the installer to verify the clearances around the differential
- Although a standard model of differential may fit a particular application, years of revisions to OEM castings and aftermarket axle housing options can create interferences not originally present in the axle's design
- Proper method for checking requires the differential assembly to be rotated in the fully assembled axle. Pay close attention to ring gear bolt heads and areas near the bearings
- Also check clearance to the axle cover – especially with non-original covers

Superseded Part Numbers

The chart below contains information on new product numbers that have replaced old product numbers.

Current Part #	Old Part #
14020-010	19722-010
14021-010	19737-010
14022-010	19760-010
14023-010	19761-010
19817-020	19817-010
19818-020	19818-010
19819-020	19819-010
19821-020	19821-010
19822-020	19822-010
